People often associate postwar Germany with technology and with its products of mass consumption, such as luxury cars. Even pop music, most notably Kraftwerk (literally 'power station') with songs such as Autobahn, Radioactivity or We are the Robots, disseminates the stereotype of a close link between German culture and technology. Technology in Modern German History explores various forms of technology in 200 years of

German history and explains how technology has been fundamental to the shaping of modern Germany. The book investigates the role technology played in transforming Germany's culture, society and politics during the 19th and 20th centuries. Key topics covered include the different stages of industrialization, the growth of networked cities, and the triumph of a teleological narrative of technology as progress. Moreover, it provides a critical revision of the history of high technology which reveals how high-tech euphoria determined certain

paths in history regardless of whether the respective technology proved to be successful. In its second part, the volume introduces new avenues in scholarship. Karsten Uhl examines neglected areas, such as rural technologies or the often-overlooked importance of everyday technologies: How did consumers or workers use new technologies? How did they appropriate and modify them? Lastly, the book considers the final decades of the 20th century and asks if they provided a significant new quality of technological change: To what degree and effects did computerization transform

professional and private life in Germany? In culture and politics, reinforced by the German variety of environmentalism, the idea of progress was challenged, as the once prevailing vision of progress gave way to new apprehensions of uncertainty evident to this day. Technology in Modern German History brings fascinating insight into a much neglected area of German history for students and scholars alike.

satellites, but its most versatile form is completely self-contained and is called inertial navigation. It uses gyroscopes and accelerometers (inertial sensors) to measure the state of motion of the vehicle by noting changes in that state caused by accelerations. By knowing the vehicle's starting position and noting the changes in its direction and speed, one can keep track of the vehicle's present position. Mankind first used this technology in World War n, in guided weapons where cost was unimportant; only 20-30 years later did it become cheap enough to be

used commercially. The electronics revolution, in which vacuum tubes were replaced by integrated circuits, has dramatically altered the field of inertial navigation. Early inertial systems used complex mechanical gimbals structures and mechanical gyroscopes with spinning wheels. The gimbals allowed the gyroscopes to stabilize a mass (called a "platform") so that it remained in a fixed attitude relative to a chosen coordinate frame, even as the vehicle turned around any or all of its three major axes.
