Model description. A model for simulating the heating of two pieces of rail with pre-loaded compression and subsequent welding was developed using multiple steps consisting of coil geometry analysis and Frequency-transient studies. The final model was set up using the AC/DC and Heat Transfer Modules.

Design and simulation of a controller for an active suspension system of a rail car I. A Daniyan1*, K.

Mpofu1 and D. F. Osadare2

Abstract: The quest to increase the performance of rail car in terms of stability, safety and ride comfort has triggered research into the design, modelling and dynamic simulation of the suspension system of a rail car.
