Fractional calculus was formulated in 1695, shortly after the development of classical calculus. The earliest systematic studies were attributed to Liouville, Riemann, Leibniz, etc.

[1,2]. For a long time, fractional calculus has been regarded as a pure mathematical realm without real applications.

Historical notes. In applied mathematics and mathematical analysis, a fractional derivative is a derivative of any arbitrary order, real or complex. Its first appearance is in a letter written to Guillaume de l'Hôpital by Gottfried Wilhelm Leibniz in 1695.. Fractional calculus was introduced in one of Niels Henrik Abel ' s early papers where all the elements can be found: the idea of ...
