File Type PDF One Dimensional Kinematics Ap Kinematics. 2. DESCRIBING MOTION.

- An important concept is that all motion is relative. When we say that something has a given velocity, that velocity is relative to something else (these are called reference frames). A car traveling to the east at 55 mph is doing so relative to Earth.

KINEMATICS - Travelling
This chapter will focus on 1- Dimensional motion, so an appropriate reference frame will be the x axis (or y axis if the object is moving up and down). Since we need to know its position at all times, we can either use a table, listing its position, or a graph. It is easier to visualize the actual motion

Dimensional Kinematics Ap

Kinematics in One Dimension Kinematics analyzes the positions and motions of objects as a function of time, without regard to the causes of motion. It involves the relationships between the quantities displacement (d), velocity (v), acceleration (a), and time (t). The first three of these quantities are vectors.
